

"With NX we have a clear competitive edge and can easily increase our volumes by a significant percentage, without having to employ an army of operational staff. This means we can handle more jobs per day, so our drivers will be earning more money per week. Everyone wins."

-Chris Godly, Operations Director, Streetwise Couriers.

NX Mobile Data

NX – FAST, RELIABLE MOBILE DATA FOR TRANSPORT

NX Explained

NX Mobile data is the best real time 'sign on screen' proof of delivery solution available for the transport industry. At DA Systems we are the experts in courier and our specialist software will revolutionise the way that your operations staff communicate with your fleet.

NX provides your drivers with comprehensive job details and any further instructions at the push of a button. Your drivers can then provide you with 100% POD's, SLA statistics and a more professional company image.

NX Benefits

- Offer 100% Proof Of Delivery capture
- Improve controller efficiency by up to 30%
- Contract winning 'sign-on-screen' technology
- Enrich working environment for staff
- Dramatically reduce communication costs
- Improve cash flow by eliminating mistakes
- Comprehensive management reporting opportunities
- Record actual driver shift information

NX Features

NX is Simple

We've taken a great deal of care developing NX. We found that drivers want a simple interface, clear job instructions and no time-wasting. NX is therefore the most intuitive mobile data software available, which makes acceptance, training and deployment really easy.

NX Job details are sent in real time

At the push of a button, full job details including addresses, deadlines, contacts and special instructions are instantly pushed out to your driver (using exclusive PUSH> technology). There's also an audible speech alert to let them know there's a new job.

NX Updates are Fast and Accurate

Once received, your driver accepts the job, which notifies control that the job is now in progress. The driver then updates the status of the job at key points (Package on Board, Waiting time, Proof of Delivery). At every stage the process is date and time stamped to avoid disputes.

NX Signature Capture

Eliminate paperwork and improve your company image at the same time. Proof of Delivery signatures are captured and sent back to your office within seconds. From there, you can either automatically e-mail them to your client or, if they can track over the internet, they can see the signature for themselves online.

NX Messaging

No – not SMS. Instant two-way messaging between the control room and drivers using GPRS data is a more efficient way to communicate. Approximately 400 messages can be sent "over the air" for the same price as 1 SMS text message.*

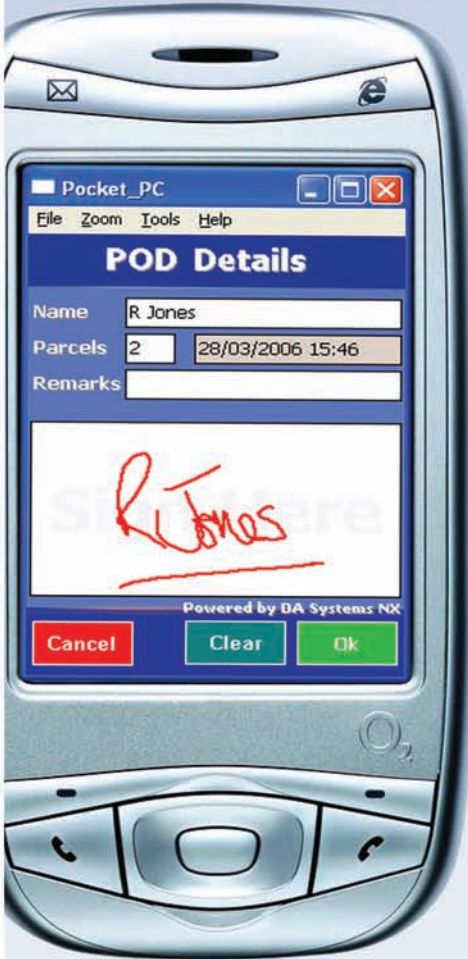

*based upon a standard £1/mb GPRS tariff vs 10p SMS

NX can be used with any system

We've designed NX to integrate with any transport software. Check with us for details.

NX is uniquely low maintenance

You won't need a dedicated member of staff to look after the devices. Unlike other applications, draining the battery on the unit does not mean a loss of the NX program or data. Simply recharge the unit and your driver is up and running again. And if we update NX, you don't have to recall your drivers. Updates are performed 'over the air'.

NX Tracking

– THE PERFECT EXTENSION TO NX MOBILE DATA

NX Tracking Explained:

NX tracking is the most advanced real-time vehicle tracking available. Simply add a GPS receiver to your mobile devices to make pro-active decisions about the utilisation of your fleet.

NX Tracking Benefits:

- Reduce costs
- Make better use of your fleet
- Improve client pickup times
- Exceed SLA expectations
- Improve operational efficiency
- Increase rider and driver earnings
- Low fixed monthly cost

NX Tracking Features:

Pro Active Tracking

See the exact location of your fleet as part of the work allocation process. Controllers can use NX tracking to assist them in making informed decisions regarding the distribution and allocation of work.

Street Level Zoom and High Resolution Views

NX tracking gives a level of detail unrivaled by other fleet tracking systems. Zoom in to see your vehicles at street level with amazing clarity over the whole of the UK, whether on monitors, plasma panels or projectors.

Powerful Geo-Fencing

Mark your important areas to give audible alerts when vehicles cross into or out of them.

Multiple Site and Channel Views

View the entire fleet, one office or just one channel at the click of a button.

Snail Trail History and Audit Reporting

From audit reporting to video replaying in minute detail the entire shift for a particular vehicle, including speed, direction and exact times.

Interactive Messaging

Click on a vehicle then type a message which will be received by the driver within seconds.

At a Glance Overview of Vehicles

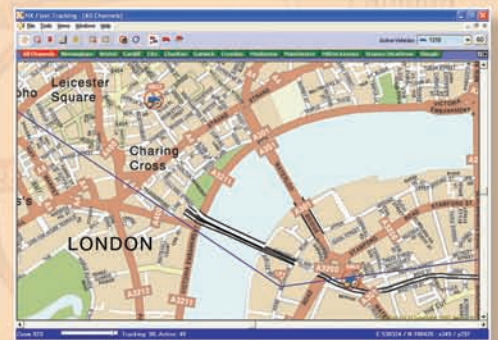

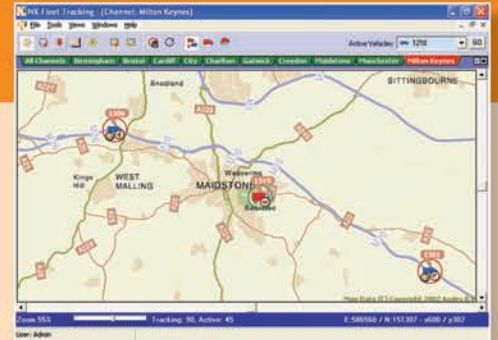

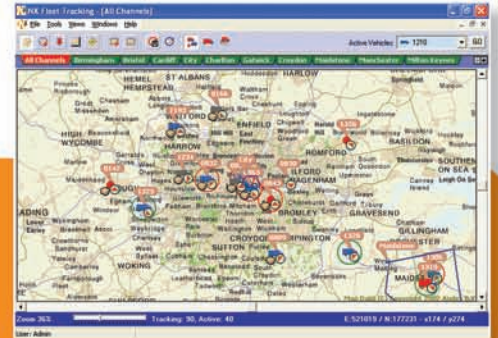

See instantly where they are, what type of vehicles they are, their speed, direction and whether or not they are busy.

Follow a Driver

Picture in picture allows usual views of the map, with separate windows showing the progress of drivers out of area.

Create Views

Create views of city centres, counties or local areas. Recall those views with a single click.

If you intend to implement mobile data within your organisation, make an informed decision – see NX first
