

See, manage and protect with Envision software

Envision brings you the ability to locate your mobile workforce in real time utilising GPS enabled Windows mobile PDA's, Smartphone's or Blackberry's. Envision provides resource tracking for your entire mobile workforce in conjunction with your call planning software.

Reports from Envision provide a comprehensive and accurate array of information, which can be used to produce mileage logs, time sheets, journey details and much more. Couple this with the rest of the powerful back-office application and you can significantly reduce time spent on administration. The new panic button feature offers a greater level of protection for lone workers in vulnerable situations.

- Location of workforce – This gives a real time geographical view of the entire mobile workforce as well as detailing each individual's work status.
- Powerful reporting – The reporting capabilities of this software enables businesses to make informed decisions that will increase staff productivity.
- Mobile working legislation – Employers can rest assured this information is automatically being recorded that relates to new legislation surrounding the working environment.
- Lone worker protection – The panic button function ensures the workforce is protected at all times allowing workers to instantly raise their concern and the back office to take appropriate action.
- More than just a phone – The mobile phone is the most important tool for any mobile workforce but it rarely used to its full capacity. This software capitalises on those untapped features.
- Competitive edge – With increased efficiency and productivity customer service will be enhanced leading to better customer retention.

Key markets: Field Service – Utilities
