

SPEDI Link

Linking tills and back office

retail software

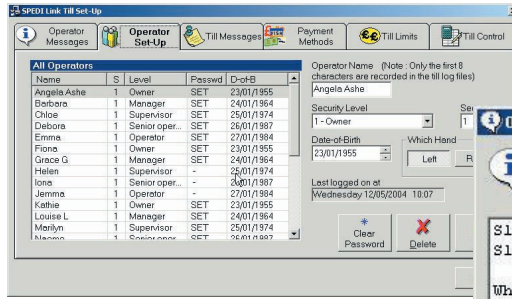

SPEDI Link is a program that runs on your system to supply data to your tills, and to collect data from them to update your stock and sales records. However, it does a lot more than this! SPEDI Link manages:

- the operational controls needed at the tills, such as the text on your till receipts
 - the security controls, such as the operator authority levels
 - cash reconciliation and reporting
 - mix and match and bulk buy offers
 - customer accounts
 - hourly sales reporting
 - department sales reporting
 - monitoring of transactions as they go through the till
 - reprinting customer receipts
 - reporting sales by product
 - detailed analysis of sales data
 - file security and back up
- and more...*

SPEDI Link will improve your profitability by increasing security and reducing errors. It is an essential companion for SPEDI PoS and is designed to link to SPEDI Manager, SPEDI Maintain and SPEDI News. *SPEDI Link can also be customised to link to other stock management packages – contact STD to discuss this option.*

operators

Monitoring

SPEDI Link shows transactions as they go through the till. They are shown as a simple but clear list, and by watching this list and the CCTV together, a comprehensive picture of activity at the checkouts is given. Up to four tills can be displayed at one time. You may also show a transaction summary, from which you can print copy customer receipts, or view department sales, sales by product, selected transaction types (such as voids, no sales), and estimates of the daily and weekly turnover. Till alerts are shown when the cash in drawer limit is exceeded, or when the operator keys a discreet warning.

Control

SPEDI Link is used to set up operator authority levels so that functions such as transaction void and refunds may be restricted. Messages can be sent to each operator as they sign on, and replies can be received. The program also helps you to develop your business by defining bulk buy schemes (such as for six packs or cases of beers), and mix and match offers such as multi-buys or buy one get one free (BOGOFs). Voucher offers may be set up which will give the customer the benefit of a future offer (such as spend £20 now and get a 5% discount next month).

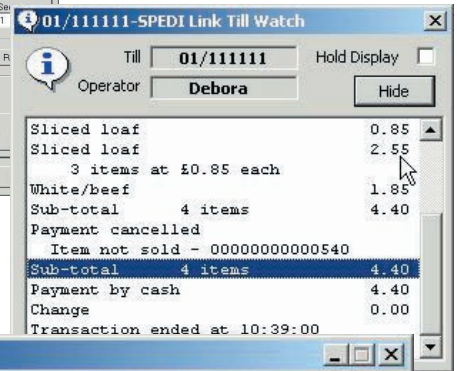

Reports

SPEDI Link produces a variety of reports including sales by hour and department. Cash reconciliation reports are available with till lifts and floats declared at the till or back office. A query sales report helps you to carry out a detailed analysis of sales for a period, looking for transactions such as no-sales, voids, sales for less than 10p, and so on. Your favourite reports can be run automatically overnight so that you may review the summary results, then examine selected reports in detail. All the data from the tills is available for analysis, and one diskette will hold details of all transactions for a week – so that your VAT records occupy far less space, and are far cheaper than till rolls.

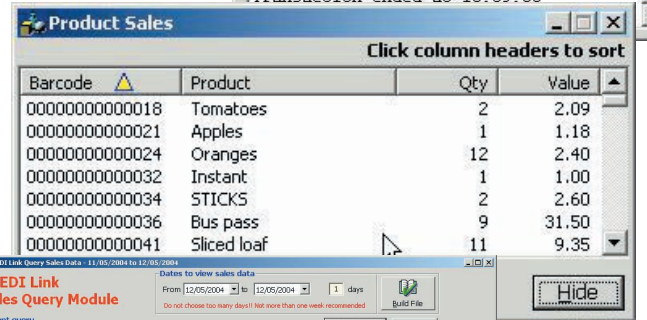

Accounts

Customer accounts may be set up. Transactions and payments are recorded at the till. Statements are printed and adjustments may be made at the back office. The credit limits are applied at the till, and optionally balances may be printed on each receipt. There is no limit to the number of accounts held, though typically not more than one hundred are kept.
