SPEDI PoS

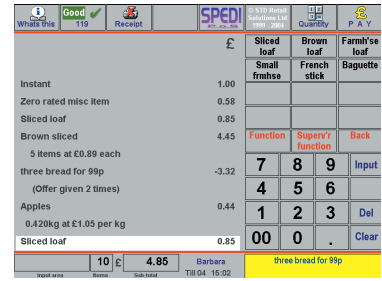

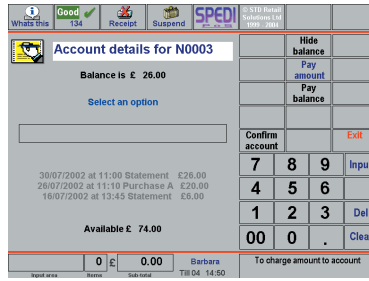

retail software

Easy to use

We developed SPEDI PoS to be the best scanning point-of-sale system. We used our 20 years of experience to design a product to increase your profits, providing the features that you need at the best possible price. Spedi PoS guides the operator using a clear display, and offers the available options in short, clear English text (or any other language if you wish). You may set up the screen yourself to include only the functions and products that you want, and to present them in the most suitable way for your business. No computer knowledge is required from the operator. The functions and procedures will be familiar from older cash register systems, but using them will be faster and easier. You can sell products by scanning a bar code, entering a velocity code, or selecting a product from lists on the screen. The payment types and procedures can be defined to meet your needs. Customer displays and receipts are clear and helpful and meet official requirements.

Secure

A secure till system makes a huge contribution to your profitability. In SPEDI PoS five security levels are available for each function. Every operator action is logged electronically and may be reviewed. With SPEDI Link, you may review transactions as they occur and carry out detailed analysis. Your operators will know that you have this information available. The cash control options include operator reports, deferred Z readings, cash reconciliation at the till or the back office, and discreet alerts when cash in drawer limits are exceeded. Vouchers may be printed to record cash back, account transactions, lottery payments, etc. The electronic log may be held as your VAT record on disk.

Stand alone

We have designed SPEDI PoS so that the entire selling process uses only the computer on which it is installed. Though the back office should be available across a network to send updated files and to receive and store sales data, selling is not affected by network problems or failures. A simple industry standard network is used, though we recommend the use of good computers.

Mix and match

There are powerful mix-and-match and multi-buy features. You can set up all types of offer, simple or more complicated. Examples include: "buy one and get one free", "buy any three cans of soup for £1.00", "buy six cans of lager and save 15p, buy 24 and save £1.00", "buy a gin and a tonic and get a lemon free", "buy any 12 bottles of Australian wine and get 5% off". You can even print vouchers for schemes such as "Buy three soap powders this week and get a free Mars bar next month if you spend over £5".

Accounts

Customer accounts can be set up using SPEDI Link or SPEDI News. Items can be charged to accounts, payments can be made to accounts, and balances can be displayed (and optionally printed) at the till. For news accounts, payments can be made to last Saturday, next Saturday, or today.

Credit and debit cards

SPEDI PoS can be linked to a Verifone 3750 terminal which gives exceptionally cost effective and easy to use processing of credit and debit cards. The terminal dials the bank automatically if authorisation is required, to protect your interests. Overnight, the transactions are collected and forwarded to the bank for settlement. The terminal is accredited for chip and pin transactions and will provide an inexpensive upgrade when the time comes. Ask our support team for the current position, as bank procedures are changing.

Scale attachment

SPEDI PoS is approved by the National Weights and Measures Laboratory for use with scales. We recommend the use of Avery or Herbert scales. Note that your till hardware must also be approved for use with scales; ask our support team for advice on this.

Versatile hardware

SPEDI PoS can be run on almost any kind of equipment which can run a recent version of Windows (NT, 98, ME, 2000, or XP). It can be run with a keyboard or a touch screen. In your own interests you should attach a retail printer, display and cash drawer. You will find that our resellers have excellent ranges of hardware available for you.

Other features include:

- Price check
- Lay away
- HALO and LALO
- Training mode
- Product search
- Create items at the till
- VAT receipts (if required)
- Operator messages and replies
- Operator alerts to the back office
- Auto end of day
- Newspaper buttons
- Bottle refunds
- Non-add items

and many more ...
